

Quadratic Equation

For the equation $ax^2 + bx + c = 0$,

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

1 Factorise $27a^3 - 343$.

[2]

2 Solve the inequality $x - 1 > 3(x^2 - 5)$.

[3]

- 3 (i) Express $y = x^2 - 6x + 13$ in the form $y = (x + h)^2 + k$, where h and k are constants. [2]

- (ii) Sketch the graph of $y = x^2 - 6x + 13$, indicating clearly the y -intercept and the **coordinates** of the turning point. [3]

- (iii) State the range of values of $\frac{1}{y}$. [1]

- 4 (a) Solve the equation $2x^3 - 7x + 2 = 0$. Show your working clearly.

[4]

- 4 (b) Express $\frac{9x}{(2x-1)(x+1)^2}$ in partial fractions.

[5]

$$\frac{9x}{(2x-1)(x+1)^2} = \frac{A}{2x-1} + \frac{B}{x+1} + \frac{C}{(x+1)^2}$$

$$9x = A(x+1)^2 + B(2x-1)(x+1) + C(2x-1)$$

$$9x = A(x^2+2x+1) + B(2x^2+x-1) + C(2x-1)$$

$$9x = Ax^2 + 2Ax + A + 2Bx^2 + Bx - B + 2Cx - C$$

$$9x = (A+2B)x^2 + (2A+B+2C)x + (A-B-C)$$

$$\begin{cases} A+2B=0 \\ 2A+B+2C=9 \\ A-B-C=0 \end{cases}$$

$$\begin{aligned} A &= -2B \\ 2(-2B) + B + 2C &= 9 \\ -4B + B + 2C &= 9 \\ -3B + 2C &= 9 \end{aligned}$$

$$\begin{aligned} -3B + 2C &= 9 \\ -3B + 2C &= 9 \end{aligned}$$

$$-3B + 2C = 9$$

$$-3B + 2C = 9$$

$$-3B + 2C = 9$$

$$-3B + 2C = 9$$

$$-3B + 2C = 9$$

$$-3B + 2C = 9$$

$$-3B + 2C = 9$$

$$-3B + 2C = 9$$

$$-3B + 2C = 9$$

$$-3B + 2C = 9$$

$$-3B + 2C = 9$$

$$-3B + 2C = 9$$

$$-3B + 2C = 9$$

$$-3B + 2C = 9$$

- 5 The function $f(x) = x^4 + x^3 + mx^2 + nx - 6$, where m and n are constants, is exactly divisible by $(x+1)$ and $(x-2)$.

(i) Find the value of m and of n .

[4]

(ii) Using the values of m and n found in part (i),

(a) find the remainder when $f(x)$ is divided by $(x+3)$,

[1]

- (b) determine, showing all necessary working, the number of real roots of the equation $f(x) = 0$. [3]

- 6 Show that the line $y = 2cx - \frac{15}{4}$ will intersect the curve $y = x^2 + 4x - 3c$ for all values of c . [5]

- 7 Find the range of values of h for which the expression $(2h-4)x^2 + 8x + h$ is always positive for all real values of x .

[4]

- 8 Find the range of values of x for which $\frac{x^2 + 2}{2x^2 - 5x - 3} < 0$.
