## PRELIMINARY EXAMINATION 2024

**SUBJECT** : Chemistry (6092/01)  
**LEVEL** : Secondary 4 Express  
**DATE** : 23 August 2024  
**DURATION** : 1 hour  
**SETTER** : Mrs Ambikai  
**VETTERS** : Ms Charlene Lye and Mr Ng Mun Leong

### READ THESE INSTRUCTIONS FIRST

Write your name, class and index number in the spaces at the top of this page.

Write in soft pencil.

Do not use staples, paper clips, glue or correction fluid.

Write your name, class and index number on the Answer Sheet in the spaces provided unless this has been done for you.

There are **forty** questions. Answer **all** questions. For each question there are four possible answers **A, B, C** and **D**.

Choose the one you consider correct and record your choice in **soft pencil** on the separate Answer Sheet.

**Read the instructions on the Answer Sheet very carefully.**

Each correct answer will score one mark. A mark will not be deducted for a wrong answer.

Any rough working should be done in this booklet.

A copy of the Periodic Table is printed on page **16**.

The use of an approved scientific calculator is expected, where appropriate.

1. Stearic acid has a melting point of  $69^{\circ}\text{C}$ .

A heated sample of pure stearic acid is cooled and the temperature is recorded every minute for 30 minutes. A graph of the results is shown.

Which process occurs between 8 and 12 minutes?

- A** boiling  
**B** condensing  
**C** freezing  
**D** melting
2. Two samples of a colourless solution are tested separately with aqueous sodium hydroxide,  $\text{NaOH}(\text{aq})$ , and aqueous ammonia,  $\text{NH}_3(\text{aq})$ , and the results are recorded.
- A white precipitate is formed with two drops of  $\text{NaOH}(\text{aq})$ . This precipitate dissolves in an excess of  $\text{NaOH}(\text{aq})$ .
  - A white precipitate is formed with two drops of  $\text{NH}_3(\text{aq})$ . This precipitate dissolves in an excess of  $\text{NH}_3(\text{aq})$ .

What can be deduced from these results?

- A** The anion present is  $\text{Cl}^-$ .  
**B** The anion present is not  $\text{Cl}^-$ .  
**C** The cation present is  $\text{Al}^{3+}$ .  
**D** The cation present is  $\text{Zn}^{2+}$ .

3. A student uses paper chromatography to find an  $R_f$  value for  $\text{Fe}^{3+}(\text{aq})$ . The result is shown.

To make the spot containing  $\text{Fe}^{3+}(\text{aq})$  more visible, the paper is sprayed with aqueous sodium hydroxide so that a precipitate of iron(III) hydroxide forms.

Under the conditions of the experiment, the  $R_f$  value of  $\text{Fe}^{3+}(\text{aq})$  is given by .....1.....

The colour of the precipitate is .....2..... .

Which row correctly completes gaps 1 and 2?

|          | 1             | 2         |
|----------|---------------|-----------|
| <b>A</b> | $\frac{x}{y}$ | green     |
| <b>B</b> | $\frac{x}{y}$ | red-brown |
| <b>C</b> | $\frac{y}{x}$ | green     |
| <b>D</b> | $\frac{y}{x}$ | red-brown |

4. The diagram shows a diffusion experiment.

Which gas, when present in the beaker over the porous pot, will cause the water level at Y to rise?

- A carbon dioxide
  - B chlorine
  - C methane
  - D nitrogen dioxide
5. Two particles have the symbols  $^{54}_{26}\text{Fe}^{2+}$  and  $^{59}_{27}\text{Co}^{3+}$ .

Which statement about these particles is correct?

- A They contain the same number of electrons.
  - B They contain the same number of neutrons.
  - C They contain the same number of protons.
  - D They do not contain the same number of protons, neutrons or electrons.
6. Magnesium exists in three stable isotopes, Mg-24, Mg-25, Mg-26.

Which statements are correct about the properties of the isotopes?

- 1 The isotopes have the same number of electrons in their outermost shells.
- 2 The isotopes have the same physical properties.
- 3 The isotopes react with hydrochloric acid in the same manner.

- A 1 and 2 only
- B 1 and 3 only
- C 2 and 3 only
- D 1, 2 and 3

7. What happens to an atom of a Group 2 element when it forms a compound with oxygen?

- A It bonds with two atoms of oxygen.
- B It takes two electrons from an atom of oxygen.
- C It shares two electrons with an atom of oxygen.
- D It transfers two electrons to an atom of oxygen.

8. Which statements about the substances, at room temperature and pressure, is correct?

- A W and X conduct electricity.
- B W and Y are elements.
- C X and Z dissolve in water.
- D Y and Z have low melting points.

9. Ethane,  $\text{C}_2\text{H}_6$ , and ammonia,  $\text{NH}_3$ , are covalent compounds.

The dot and cross diagrams of these compounds are shown below.

Which statements are correct?

- 1 A molecule of ethane contains twice as many hydrogen atoms as a molecule of ammonia.
- 2 An unreacted nitrogen atom has five outer electrons.
- 3 In a molecule of ethane, the bond between the carbon atoms is formed by sharing two electrons, one from each carbon atom.

- A 1, 2 and 3
- B 1 and 2 only
- C 1 and 3 only
- D 2 and 3 only

10. A series of experiments were carried out to investigate the properties of a newly discovered substance. Which observation shows that the substance **cannot** be an element?

- A It melts at a fixed temperature.
- B It forms cation with two oxidation states.
- C It decomposes to give a colourless gas when heated in the air.
- D Electrolysis of the molten substances gave one product.

11. The relative molecular mass,  $M_r$ , of liquid Z is 60. Z contains 40.0% carbon, 6.70% hydrogen and 53.3% oxygen.

Which row shows the correct empirical and molecular formulae of Z?

|          | empirical formula                | molecular formula                |
|----------|----------------------------------|----------------------------------|
| <b>A</b> | $\text{CH}_2\text{O}$            | $\text{CH}_2\text{O}$            |
| <b>B</b> | $\text{CH}_2\text{O}$            | $\text{C}_2\text{H}_4\text{O}_2$ |
| <b>C</b> | $\text{C}_2\text{H}_4\text{O}_2$ | $\text{C}_2\text{H}_4\text{O}_2$ |
| <b>D</b> | $\text{CH}_3\text{O}$            | $\text{C}_2\text{H}_6\text{O}_2$ |

12. The equation for the reaction between ethyne,  $\text{C}_2\text{H}_2$ , and oxygen is shown.

When the equation is balanced, what is x?

- A** 2  
**B** 3  
**C** 4  
**D** 5
13. Aqueous silver nitrate,  $\text{AgNO}_3$ , reacts with aqueous potassium chromate (VI),  $\text{K}_2\text{CrO}_4$ , to give a yellow precipitate.

What is the ionic equation for this reaction?

- A**  $2\text{AgNO}_3(\text{aq}) + \text{K}_2\text{CrO}_4(\text{aq}) \rightarrow \text{Ag}_2\text{CrO}_4(\text{s}) + 2\text{KNO}_3(\text{aq})$   
**B**  $2\text{Ag}^+(\text{aq}) + 2\text{NO}_3^-(\text{aq}) + 2\text{K}^+(\text{aq}) + \text{CrO}_4^{2-}(\text{aq}) \rightarrow \text{Ag}_2\text{CrO}_4(\text{s}) + 2\text{NO}_3^-(\text{aq}) + 2\text{K}^+(\text{aq})$   
**C**  $2\text{Ag}^+(\text{aq}) + \text{CrO}_4^{2-}(\text{aq}) \rightarrow \text{Ag}_2\text{CrO}_4(\text{s})$   
**D**  $\text{Ag}^+(\text{aq}) + \text{CrO}_4^{2-}(\text{aq}) \rightarrow \text{AgCrO}_4(\text{s})$
14. When gases react, the volume of gaseous reactants may be different from the volume of gaseous products.

For which reaction is the percentage change in the volume of gas largest? (Assume each reaction goes to completion.)

- A**  $2\text{SO}_2(\text{g}) + \text{O}_2(\text{g}) \rightarrow 2\text{SO}_3(\text{g})$   
**B**  $\text{CH}_4(\text{g}) + 2\text{O}_2(\text{g}) \rightarrow \text{CO}_2(\text{g}) + 2\text{H}_2\text{O}(\text{g})$   
**C**  $\text{N}_2(\text{g}) + 3\text{H}_2(\text{g}) \rightarrow 2\text{NH}_3(\text{g})$   
**D**  $2\text{C}_2\text{H}_6(\text{g}) + 7\text{O}_2(\text{g}) \rightarrow 6\text{H}_2\text{O}(\text{g}) + 4\text{CO}_2(\text{g})$
15. An aqueous solution is made by dissolving 3.4 g of sodium hydroxide,  $\text{NaOH}$ , to make  $500 \text{ cm}^3$  of solution.

What is the concentration, in  $\text{mol / dm}^3$ , of this sodium hydroxide solution?

- A** 0.0068  
**B** 0.085  
**C** 0.17  
**D** 6.8

16. The table below shows the results of different experiments conducted in two acids, X and Y, of equal concentration.

|                                                                                                                 | X                                                      | Y                                                       |
|-----------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|---------------------------------------------------------|
| conductivity of solution                                                                                        | 400 mS                                                 | 7.0 mS                                                  |
| temperature change when excess acid reacted with 100cm <sup>3</sup> of 1.0 mol/dm <sup>3</sup> sodium hydroxide | 6.9 °C                                                 | 6.7 °C                                                  |
| reaction with magnesium                                                                                         | Hydrogen gas produced rapidly with rapid effervescence | Hydrogen gas produced slowly with gradual effervescence |

(mS is the unit for conductivity)

Which of the following deductions can be made about acids X and Y?

- A** X is a weak acid but Y is a strong acid.
- B** X is a strong acid but Y is a weak acid.
- C** Both X and Y are strong acids, but 1 mole of X gives 1 mole of hydrogen ions while 1 mole of Y gives 2 moles of hydrogen ions.
- D** Both X and Y are strong acids, but 1 mole of X gives 2 moles of hydrogen ions while 1 mole of Y gives 1 mole of hydrogen ions.
17. 1.0 g of the following oxides are added separately to water. Which of the following shows the correct pH of the resulting solution?

|          | oxide            | pH of the resulting solution |
|----------|------------------|------------------------------|
| <b>A</b> | sulfur dioxide   | 13                           |
| <b>B</b> | sodium oxide     | 8                            |
| <b>C</b> | carbon monoxide  | 4                            |
| <b>D</b> | nitrogen dioxide | 2                            |

18. The table shows the colour change for three pH indicators used in the laboratory.

| indicator        | colour change<br>low pH → high pH | pH at which colour change<br>takes place |
|------------------|-----------------------------------|------------------------------------------|
| phenolphthalein  | colourless to pink                | 9.0                                      |
| bromothymol blue | yellow → blue                     | 6.5                                      |
| methyl orange    | red → yellow                      | 4.0                                      |

Which solution shows the correct colour at its given pH?

|          | pH | indicator used   | colour     |
|----------|----|------------------|------------|
| <b>A</b> | 2  | methyl orange    | yellow     |
| <b>B</b> | 5  | bromothymol blue | blue       |
| <b>C</b> | 9  | bromothymol blue | blue       |
| <b>D</b> | 12 | phenolphthalein  | colourless |

19. Four test-tubes are set up as shown.

What is the effect of adding dilute hydrochloric acid to each test-tube?

|   | W | X | Y | Z |
|---|---|---|---|---|
| A | x | √ | x | √ |
| B | √ | x | √ | x |
| C | √ | x | √ | √ |
| D | √ | x | x | x |

key

x = clear solution

√ = precipitate formed

20. Which of the following methods is most suitable for preparing magnesium nitrate?

- A** Add excess nitric acid to magnesium oxide. Filter and crystallise the filtrate.  
**B** Add excess magnesium carbonate to nitric acid. Filter and crystallise the filtrate.  
**C** Add equal volumes of  $0.1 \text{ mol/dm}^3$  magnesium hydroxide and  $0.1 \text{ mol/dm}^3$  nitric acid together.  
**D** Add equal volumes of aqueous magnesium chloride and aqueous sodium nitrate together and filter.

21. Which row correctly describes the conditions used in the Haber process?

|   | temperature / °C | pressure / atm | catalyst           |
|---|------------------|----------------|--------------------|
| A | 400              | 350            | vanadium (V) oxide |
| B | 450              | 250            | iron               |
| C | 200              | 350            | vanadium (V) oxide |
| D | 300              | 250            | iron               |

22. Which are redox reactions?

- A** 1, 2 and 3  
**B** 1 and 2 only  
**C** 1 and 3 only  
**D** 2 and 3 only

27. The reactivity of the halogens decreases down the group.

Which statement explains this observation?

- A Decreasing distance between the nucleus and the outer shell makes it easier for the atom to attract electrons.
  - B Increasing distance between the nucleus and the outer shell makes it easier for the atom to attract electrons.
  - C Decreasing distance between the nucleus and the outer shell makes it harder for the atom to attract electrons.
  - D Increasing distance between the nucleus and the outer shell makes it harder for the atom to attract electrons.
28. Compound Y is thermally decomposed with carbon using the following set-up.

A brown solid is formed in the reaction tube and a white precipitate forms in limewater.

What could be compound Y?

- A copper (II) oxide
  - B calcium oxide
  - C magnesium oxide
  - D sodium oxide
29. Galvanising is the process in which a layer of zinc is coated onto steel.
- Which of the following will take place in galvanised steel?

- A The displacement of iron by zinc.
- B The oxidation of zinc to zinc oxide.
- C The reaction of iron with zinc.
- D The rusting of iron.

30. An endothermic reaction has an activation energy of  $x$ .

Which energy profile diagram correctly represents this reaction?

31. The formation of liquid water from hydrogen and oxygen may occur in three stages.

Which stages are endothermic?

- A** 1, 2 and 3  
**B** 1 only  
**C** 1 and 3  
**D** 2 only

32. In four separate experiments, 1, 2, 3 and 4, nitric acid is added to an excess of marble pieces and the volume of carbon dioxide gas formed is measured.

In all four experiments the same volume of nitric acid is used.

The concentration, or temperature, or both concentration and temperature of the nitric acid, are changed.

The results of the experiments are shown on the graph.

Which statement is correct?

- A A lower concentration of acid is used in experiment 3 than in experiment 1
  - B Experiment 4 is faster than experiment 3.
  - C The acid used in experiment 2 is of a lower concentration than in experiment 1.
  - D The temperature of the acid is the same in experiments 1 and 2.
33. Which of the following reactions will **not** be affected by an increase in the surface area of reactant particles?
- A  $\text{BaCl}_2(\text{aq}) + \text{Na}_2\text{SO}_4(\text{aq}) \rightarrow \text{BaSO}_4(\text{s}) + 2\text{NaCl}(\text{aq})$
  - B  $\text{CaCO}_3(\text{s}) + 2\text{HNO}_3(\text{aq}) \rightarrow \text{Ca}(\text{NO}_3)_2(\text{aq}) + \text{CO}_2(\text{g}) + \text{H}_2\text{O}(\text{l})$
  - C  $\text{Cu}(\text{s}) + 2\text{AgNO}_3(\text{aq}) \rightarrow \text{Cu}(\text{NO}_3)_2(\text{aq}) + 2\text{Ag}(\text{s})$
  - D  $\text{Mg}(\text{s}) + 2\text{HCl}(\text{aq}) \rightarrow \text{MgCl}_2(\text{aq}) + \text{H}_2(\text{g})$

34. The diagram shows a fractionating column used in the separation of petroleum.

Which row explains why fraction R is collected above fraction S?

|          | boiling point of R | average molecular mass of R |
|----------|--------------------|-----------------------------|
| <b>A</b> | greater than S     | greater than S              |
| <b>B</b> | greater than S     | smaller than S              |
| <b>C</b> | smaller than S     | greater than S              |
| <b>D</b> | smaller than S     | smaller than S              |

35. Which of the following structure is **not** an isomer of butene?

36. Compound Q reacts with hydrogen gas in the presence of a nickel catalyst at 150 °C to form compound R.

Which of the following statements is true of Q and R?

- A** Both Q and R can decolourise aqueous bromine in the dark.  
**B** If Q is ethene, R is propane.  
**C** Q is unsaturated while R is saturated.  
**D** Q undergoes substitution reaction to form R.
37. A carboxylic acid with molecular formula  $C_4H_8O_2$  reacts with an alcohol with molecular formula  $C_3H_8O$  to form an ester.

What is the formula of the ester formed?

- A**  $CH_3-CH_2-C(=O)O-CH_2-CH_2-CH_2-CH_3$
- B**  $CH_3-CH_2-CH_2-C(=O)O-CH_2-CH_2-CH_3$
- C**  $CH_3-CH_2-CH_2-C(=O)O-CH_2-CH_2-CH_2-CH_3$
- D**  $CH_3-CH_2-C(=O)O-CH_2-CH_2-CH_3$

38. Which of the following will **not** allow a student to distinguish between ethanol and ethanoic acid?
- A** acidified potassium manganate (VII)  
**B** blue litmus paper  
**C** red litmus paper  
**D** sodium carbonate

39. The equation shows the formation of a polymer called Kevlar.

Which row describes Kevlar?

|          | how the monomer is formed   | type of polymer |
|----------|-----------------------------|-----------------|
| <b>A</b> | addition polymerisation     | polyamide       |
| <b>B</b> | addition polymerisation     | polyester       |
| <b>C</b> | condensation polymerisation | polyamide       |
| <b>D</b> | condensation polymerisation | polyester       |

40. Which statement is true of flue gas desulfurisation?

- A** Air pollutants are removed by this method.
- B** Calcium carbonate is used to remove flue gases.
- C** Carbon monoxide is formed when sulfur dioxide is removed.
- D** Gypsum is formed when sulfur dioxide reacts with calcium carbonate.

The volume of one mole of any gas is 24 dm<sup>3</sup> at room temperature and pressure (r.t.p.).

The Avogadro constant,  $L = 6.02 \times 10^{23} \text{ mol}^{-1}$
